

Sierra

SETTING A NEW STANDARD FOR WAREWASH

Beta

General Information

- Sierra is a multi-product chemical dispensing system for use in machine warewash applications.
- All programming is done through a 5-button keypad and 2-line, 16-character display.
- The “Smart” Screen concept simplifies the configuration process by only displaying the screens that are applicable to your application mode and machine type. For example, if you program your Sierra to run in Probe rather than Time mode, the Sierra will only display subsequent programming and status screens that apply to Probe mode.
- The Sierra can store and display vital information such as total racks washed, racks washed since last drain, total drains, wash ON hours, and detergent feed ON hours.

No More Trouble Calls

Sierra makes scaled probes work like new!

VCP™ (Virtual Clean Probe)

- Sierra comes with the patented VCP technology. VCP guarantees superior probe performance by eliminating the effects of fouling caused by calcium and protein buildup. If you are concerned about probe performance and accuracy, VCP is an excellent way to reduce the need for service calls, reduce chemical waste, and ensure optimal results.
- Sierra's proprietary flex rinse tube typically lasts 6 times longer (or more) than competitors tubes; think of what eliminating even three trouble calls per account is worth!

Beta

What your customer wants...

Clean Dishes Every Time!

- When a rep has to service an account, they lose time and the account has poor cleaning quality or dirty dishes piling up while they wait. Sierra's alarms diagnose problems so accounts can self-service, saving everyone grief and keeping dishes consistently clean
- **CHECK PRODUCTS:** Instructs kitchen workers to replenish chemical supply.
- **DRAIN TANK:** Instructs kitchen workers to drain the dirty tank water so the account can be assured their dishes will always be clean. If the tank is not drained, the washer can be put on hold until the water is drained.
- **ADD DETERGENT:** Instructs kitchen personnel to replenish detergent supply.
- **DET FEED FAILURE:** Instructs kitchen personnel to delime tank.

Beta

No need for a Mechanical Rack Counter – *It's built in!*

- Sierra counts the total number of racks washed up to 99,999,999, so billing by the rack is easy!
- Sierra logs account management information that can be used to analyze performance and costs. On-board data logging of total racks, racks since last drain, total drains, detergent run hours, and wash on hours is standard with Sierra. The data can then be used to calculate account information like chemical cost per rack and location efficiency.

More Product Details

- Sierra is available in either two or three product systems, and the first product position can be ordered as either a pump, plastic solenoid, or metal solenoid
- Sierra has a universal power supply, operating on constant power 100-240 VAC
- Approvals - CSA, NSF
