

## Equipment Technical Bulletin

### DF1 / DF2 / DFT – Smart pump / transport pump screws change

#### Reason/Background:

The vendor of the transport pumps Shurflo, as used in the Diverflow laundry systems has begun to use different screws to assemble the pump head assembly. This is a manufacturer upgrade to allow them to improve production controls.

#### Solution/Action:

The new screws will be visible in new pumps and spares, a Torx screw with T25 head (fig 1) replaces the Phillips screw currently in place.

This ETB is published to inform field representatives to be equipped with a T25 Torx driver when visiting sites to service this equipment. No further action is needed.

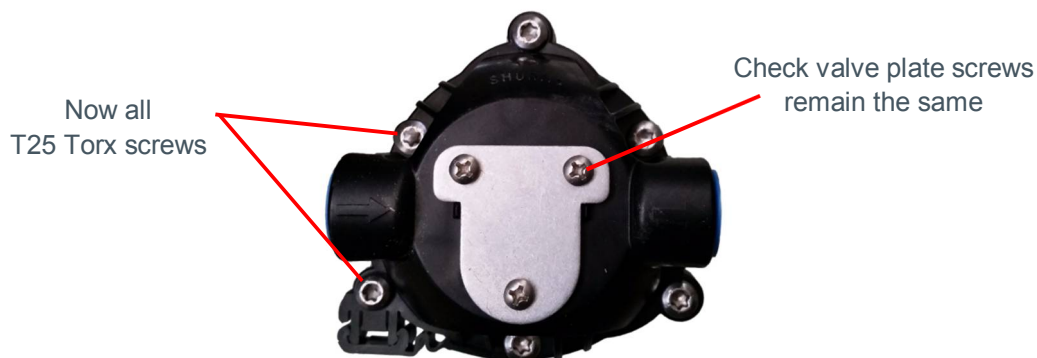

Fig 1. Example pump head with new screws

#### Affected items:

All DF1, DF2 and DFT systems and relevant spare parts.
