FREEDOM SYSTEM DE™

LESS SERVICE = BETTER RESULTS

By design, Freedom System DE™ uses digital technology for dependable, highly accurate and consistent dispensing. It's a powerful tool that provides technicians with better information to reduce service while providing accounts dependable dispensing with maximum results.

With Freedom System DE™, service technicians can view the activity of the dispenser over a period of time instead of just looking at present conditions. This helps service techs diagnose problems faster and minimizes the chance of something being overlooked that could compromise results, requiring yet another service call.

WHAT IS PROBELOGIC™?

Engineered with digital capability, ProbeLogic™ uses a combination of patented software and board design to track every condition of the probe to maximize results at the lowest possible cost. ProbeLogic™ can even switch from probe to probeless operation in conditions that would normally require a service call. And just as quickly as it changed from probe to probeless, it will automatically return to probe operation when conditions allow . . . all without interrupting the operation of the dishwasher, or generating a service call.

ONE DISPENSER

Every Freedom System DE™ controller has the same engineering design and capabilities built into it. The concept is simple: *It has all of the brains and power you need, but how fast you want to drive it is up to you.*

Choose from temperature probes, product level alarms, display choices and alarm conditions to fit your customers' needs. At any time, any feature can be programmed and/or installed, in the field. This allows you to implement one dispenser controller across your entire service network. It has the flexibility that allows it to be tailored to your whole customer base while offering them features and benefits your competitors can't! That's smart. That's powerful. That's economical. How many more reasons do you need to switch to Freedom System DE™?
