Effective Splashback Control

Introducing the only urinal screens to virtually eliminate urine splashback. Both the eckoscreen™ and powerscreen use patent pending Sealed Bristle Technology™ which prevents splashback and spread of disease-causing microbes caused by urine impacting the back wall or still water in a public urinal. With the reduction of splashback and our Anti-Microbial technology, a cleaner public restroom is possible.

- ✓ Reduces cross contamination and effective against bacteria such as E. coli, Klebsiella and Staph, which are commonly found in public urinals.
- ✓ Eliminates odors while emitting fresh, clean scents that last twice as long as traditional screens.
- ✓ Anti-splash design prevents splashback, reduces odor, floor and surrounding wall deterioration and the spread of bacteria throughout the restroom.
- ✓ Designed for use in heavily used public restrooms.
- ✓ Significant cost savings by reducing inventory, labor costs, and product/packaging waste.
- ✓ Provides improved hygiene in water and waterless urinals.

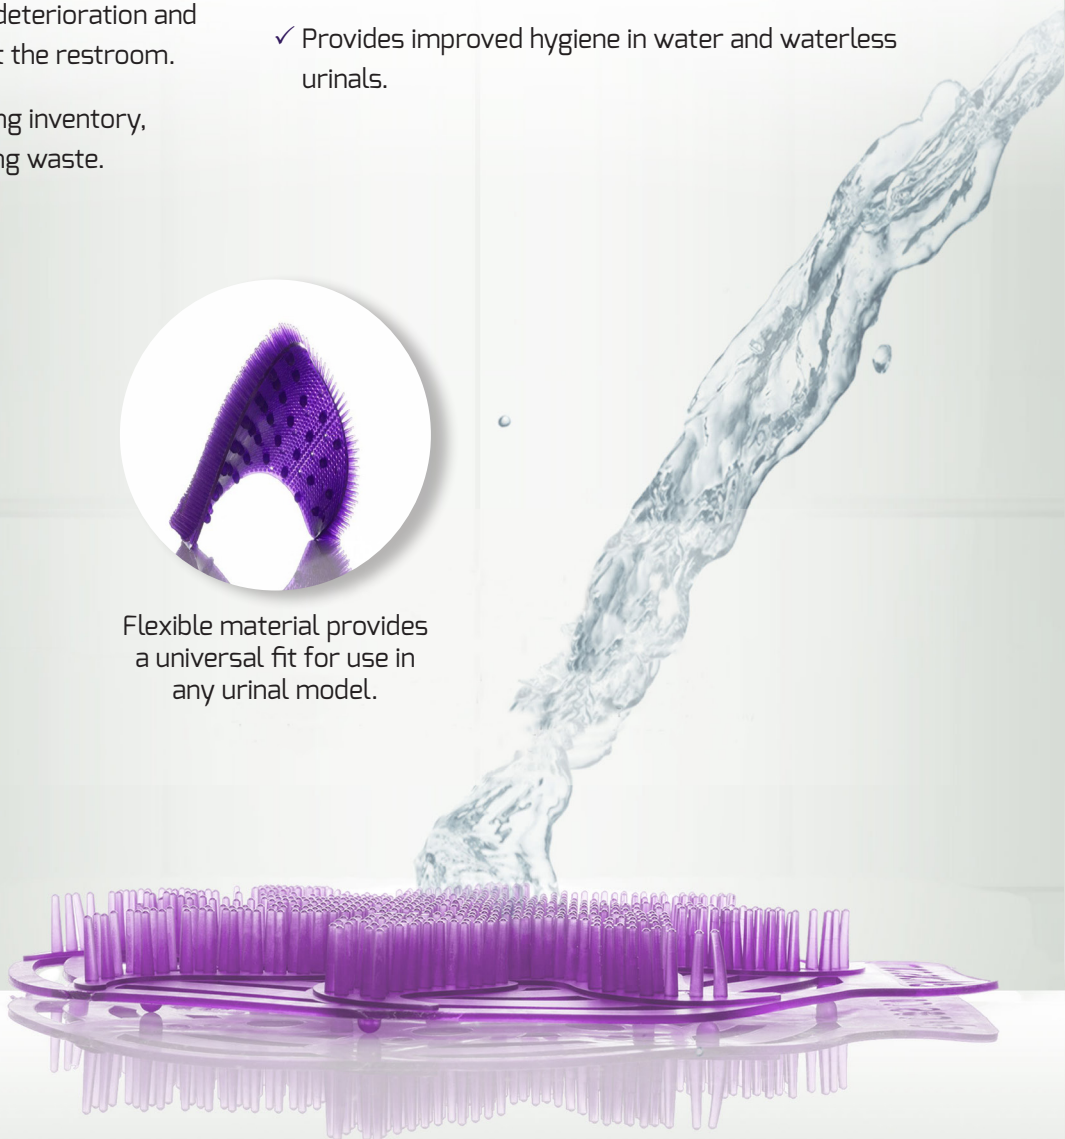

The only product to virtually eliminate urine splashback while controlling odors.

Flexible material provides a universal fit for use in any urinal model.

This product is designed to biodegrade in a biological landfill in less than 5 years.
